

## *Lachenalia mathewsii*

**Plant Botanical Name:**

*Lachenalia mathewsii*

**USBG Plant Location:**

Conservatory

**Conservatory Room Location:**

Rare and Endangered Species

**Plant Threat Level:**

Endangered

*Lachenalia mathewsii* is an endangered plant and was considered extinct from 1943 until 1983, when it was rediscovered. The genus *Lachenalia* is endemic to southern Africa and is the largest genus in the Hyacinth family (Hyacinthaceae). Unfortunately, most of the natural habitat has been converted to agricultural use and, as a result, it grows naturally in only one area. Luckily, Kirstenbosch National Botanic Garden in Capetown, South Africa, has worked to make plants and seeds available so that today *Lachenalia mathewsii* is grown worldwide.
